

The project paramers are as follows:

1. Group: 2 students.
2. Hardware: ESP-32 WROOM-32; 128×64 OLED display; BH1750; tact switch.
3. After startup, the device operates in AP mode. The user can enter wireless network login credentials. The connection parameters must be stored in flash memory.
4. After the Wi-Fi parameters are set, the device connects to the wireless network. On subsequent device resets, it automatically connects to the configured Wi-Fi network.
5. Wi-Fi settings reset button.
6. The device hosts a web page displaying the light intensity value — a numeric value plus a graphical indicator. The page operates asynchronously.
7. The light intensity value and the network connection status are displayed on the OLED screen.
